

Home Growing Planner

Location: Barcelona - Zone: 10a - Crops: carrots

Overview

Carrots prefer loose, sandy soil and full sun. Ensure they have enough space to grow and avoid overcrowding.

Month-by-Month

April

- Plant carrots (sow seeds directly in the garden).
- Water regularly to keep the soil moist but not soggy.

May

- Thin carrot seedlings to allow for proper spacing (2-4 inches apart).
- Continue watering and weeding as necessary.

June

- Monitor for pests and diseases, and take action if needed.
- Keep the soil consistently moist as temperatures rise.

July

- Harvest early varieties of carrots if they are ready (usually 50-75 days after planting).
- Continue to care for remaining carrots in the ground.

August

- Finish harvesting any remaining carrots before the end of the month if not overwintering.
- Prepare the soil for fall planting if desired.
